

Home Assignment:

1. Add the resume folder containing the resume files to the existing workspace.
2. write a prompt to implement a batch ingestion workflow for resumes.
3. Configure the workflow to process resumes in batches of 5 or 10 files per run.
4. Validate the ingestion process by testing multiple batches and verifying that all resumes are successfully ingested.

VS Code interface showing the implementation of Phase 7 utilities. The `regex.ts` file defines three regular expressions for email, phone, and experience extraction. Consumption: Parser services (Phase 9) will import these utilities for deterministic extraction.

Postman Validation for Phase 7:

No standalone API endpoint is required for this phase. Validation is through code inspection:

Verify:

- `src/modules/ingestion/utlis/regex.ts` exists with the three regex exports
- Regex patterns match the architecture specification
- Parser services (Phase 9) import and consume these utilities

Home Assignment - Resume ingestion batch flow

Prompt Given in copilot - Act as an architect and analyze the entire project. Created a folder for Resumes under src/Resumes in existing workspace. Need to implement a batch ingestion workflow for resumes. The workflow should be configurable to process resumes in batches in 5-10 files per run. List out the changes and can be implemented post my approval. Also list out the tests that needs to be performed once the workflow implementation is completed.
